

## Tank Inspection and Scoping Engineer - The Netherlands / Europe

We are recruiting a tank Inspection and Scoping Engineer to join our Team for various project in The Netherlands (Rotterdam area) and abroad (international work). Our clients are international operating company. Verantio has been invited to provide support in inspection and scoping of their storage tanks by drafting all relevant documents (e.g. initial scoping list, inspection reports, RBI updates, engineering support, etc.) to comply with their maintenance management processes. This is an opportunity to join our dynamic & diverse team of experienced engineers involved in providing technical advice, asset management services, project delivery and reliability as well as integrity management of Client Assets.

### Responsibilities

The successful candidate will, in coordination with the project manager:

- Gather all information as required for a inspection / scoping process on site;
- Monitoring routine visual inspections of the tank (in- and out-of-service) and coordinate the inspection work;
- Examine the maintenance & inspection history records;
- Review of NDT/Inspection reports;
- Perform field surveys (inventory) for defining items for the initial scope process;
- Complete all the required scoping reports, repair advises and forms;
- Verify whether all approved scope items have been installed /carried out (at shutdown);
- Work in close cooperation with client representatives to ensure the desired results are achieved;
- Maintain regular communication with the project manager regarding job status, problems, concerns, etc.
- QC of safety devices;
- Work to and uphold the latest standards as provided by the Verantio group.

### Requirements

- Acquainted with the HSE rules within the Oil & Gas industry;
- Technical background (MTS, HTS) with skills and further training/qualifications in Codes and Standards, Quality Assurance / Control processes, storage tank maintenance, NDT, inspection, welding, corrosion or failure analysis desired;
- Preferably EEMUA-159 or API-653 certified;
- Skills in reliability and integrity of refinery related equipment, more specifically Terminals and Depots;
- Good knowledge of the interdisciplinary engineering fundamentals as applied to Refineries, Terminals and/or Depots;
- Excellent communication skills and the ability to draw upon regional and global skills and knowledge to assist with the maintenance projects;
- Ability to build and maintain relationships across the organization;
- Excellent team building skills and ability to work both virtually and across cultures;
- Strong engagement skills;
- Proficiency in the Dutch and / or English language;

### Company

Founded by a team of experts with solid engineering and plant integrity background, Verantio provides high performance services and engineering solutions to our clients. Our knowledge is based on industry best practices as derived from years of international experience in the consultation, operation, inspection, training and engineering support services, as applied in the oil and gas industry.

Please note: We occasionally amend or withdraw jobs and reserve the right to do so at any time, including prior to the application closing date.
