

Are you in compliance?

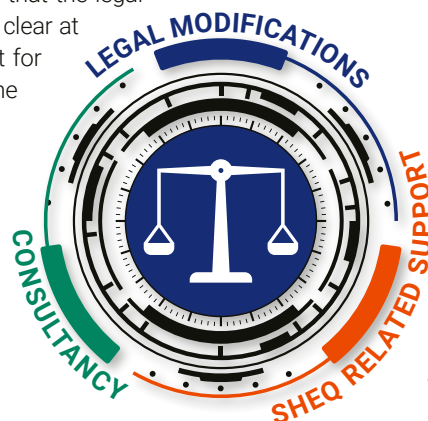

Technical Legal Support

World-wide, serious and costly accidents with conventional storage tanks, have occurred over the last decade which has triggered a greater awareness regarding safety and environmental issues. Subsequently governments throughout the world have progressively strengthened the legislative requirements.

In addition to country specific legislation, international legislation is getting more important. For effective implementation of relative costly studies, it is of importance that the legal starting points for your unique situation are clear at the start of each project. It is very important for you as one asset owner to be “ready” for the future. If you are confident that shutdowns of your assets can be a “once in a lifetime opportunity”. Verantio can assist you by deploying a multi-discipline team for your project.

We can supply:

- Legal gap analyses (e.g. PGS 29 specifically for NL)
- Implementation support of environmental permits (technical support)
- Due Diligence studies

As part of our Scoping service, we can:

- Define required legal scope based on the environmental permit (License to Operate)
- Execute engineering in line with legal modifications

We can execute:

- Emission calculations
- Feasibility studies (new tank pit design)
- TRIPOD analyses
- Support for HAZOP studies
- Management of Changes
- SHE Audits
